

# Proindustry

credible partner of your project

# ABOUT US

We are a company experienced in outsourcing with references from leading manufacturers in the field of chemistry and the food industry providing industrial installations all over the world since 2004 as AD FIRMA SERVICE. In 2012 we consolidated to Proindustry s.r.o. as a group of technical personnel for full project coverage from mechanical installations and wiring to automation and commissioning.

We are a **stable** and **reliable** team constituting the value of Proindustry with dozens of happy customers every year, thanks to professional collaboration on projects and also our willingness and effort to improve our work.

**“We are more than just some workforce on your project. We are part of it.”**

We operate in the food and chemical industries. We specialise in challenging projects of setting up production machines and structures with most references being silage and transport systems for the distribution of plastic bottles in industrial applications.

Our experience also extends to installations of high capacity filtration systems in the paper industry, milk processing in the food industry, and piping installations in every industry.

# Complete solutions for your project

Industrial electrical installations | Industrial automation and process controls  
Assembly, installation of machines and demanding structures

# OUR SERVICES

---

## AUTOMATION

**PLC#**"We offer services in industrial control and automation of production processes. Adjustment and servicing of machines and equipment and their optimisation in the production process. Creation and development of technological and production processes management. Data collection and archiving. We provide fully automated solutions from Siemens, B&R, Omron, Danfoss, Allen Bradley, and Telemecanique.

## ELECTRICAL EQUIPMENT AND WIRING

Design, assembly, installation and inspection of electronic equipment, machinery and distribution systems.

**MOTION & CNC#**Motion control of single or multiple axis machines using Omron and B&R control systems.

**SCADA#**System of central collection, management and archiving of machine data and production processes.

## MECHANICS AND ASSEMBLY

Installation, assembly and disassembly of machines, transport and storage systems, production lines and demanding structures. Full coverage of installation machinery and production equipment. Manufacture of mechanical components.

**NET#**We provide remote monitoring and automation maintenance by means of an Internet connection with immediate service action.

**ROBOT#**Programming and servicing of FANUC industrial robots.

## SERVICING

We provide complete turnkey installations and their servicing.

---

# References

# Transport Systems

# Transport Systems

Installation and control of air and belt transport technology for bottles

# Silage Systems

# Silage Systems

Installation and control of bottle storage and distribution technology in pre-production.

# Machines and Production Lines

Installation of single-purpose machines and production lines.

# Filtration Systems

Installation of large scale filtration systems.

# Dairy and Piping Systems

Installation and control of technologies in the dairy industry and piping assembly.
